

VCONIC

Conversation Data Management with AI

Overview

VCONIC MCP Server is the reseller distribution of the open-source vco. It gives AI assistants and applications a standards-based way to create, analyze, and manage IETF vCon conversation data without forking the

What it delivers

- IETF vCon compliant conversation storage and retrieval
- MCP and REST interfaces for AI assistants, apps, and workflows
- Search, analytics, tagging, and extensible plugin architecture
- Reseller-ready packaging, support positioning, and partner tooling

Source copy adapted from repository documentation and VCONIC reseller guides.
